**Aim: To Build Portfolio website using html and css.**

# Purpose of Project:

In a nutshell, you need a portfolio website to showcase your work. Whether you're an individual, a small team of two or a company of ten people, it's crucial that you have a unique online approach. A website portfolio will help you stand out from the crowd, show your uniqueness, build trust, and make sure that others can actually find you.

There are certain areas where a website portfolio is more important than others. If you find yourself in one of the following, it's safe to assume that you need a portfolio like a book needs words:

- Web design
- Web development (outsourcing, online shop)
- Graphic design (logo design, corporate ID, flyers, catalogs, packaging)
- Marketing (digital marketing, print design, SEO, PPC advertising)
- Art design (illustration, video, audio, photography)

# Scope Of Project:

The basic formula of a portfolio website would include a logo, tagline, your best work, and contact information. Sometimes this works but in many cases, it's a poor implementation. To highlight your portfolio in another light, consider to include other key elements that will boost your portfolio's user experience: case studies, testimonials, blog, and even a project you're currently working on at the moment. These are vital elements.
When working on your portfolio site design, think about the elements your future clients should be able to find. Ask yourself – **what is the purpose of your portfolio?** Do you want to sell your services, are you looking for a job and want to be hired, or is it a website about you? The main focus of your portfolio site should be catching visitor's attention, and the following elements will help you do that.

# Overview of Project:

- It only takes a few seconds to lose a visitor's attention, so to be sure to use these seconds smart. Your potential clients will see the visuals first and if they like what they see, they will continue looking for more details. In other words, you need an awesome and appealing presentation of your works.
- It can be done in many ways – photo slideshows, video presentations, thumbnail galleries, etc. For example, if you're a logo designer, ensure you show a great quality picture of a logo in different variations. Put the logo on products, business cards, show it in different colors – this will extend your competence.

# Hardware Required:

- Central Processing Unit(CPU)
- Monitor
- Mouse
- Printer
- Keyboard

# Software Requirement':

- VS Code
- Chrome
- GitHub
- Netlify
